GIGALA

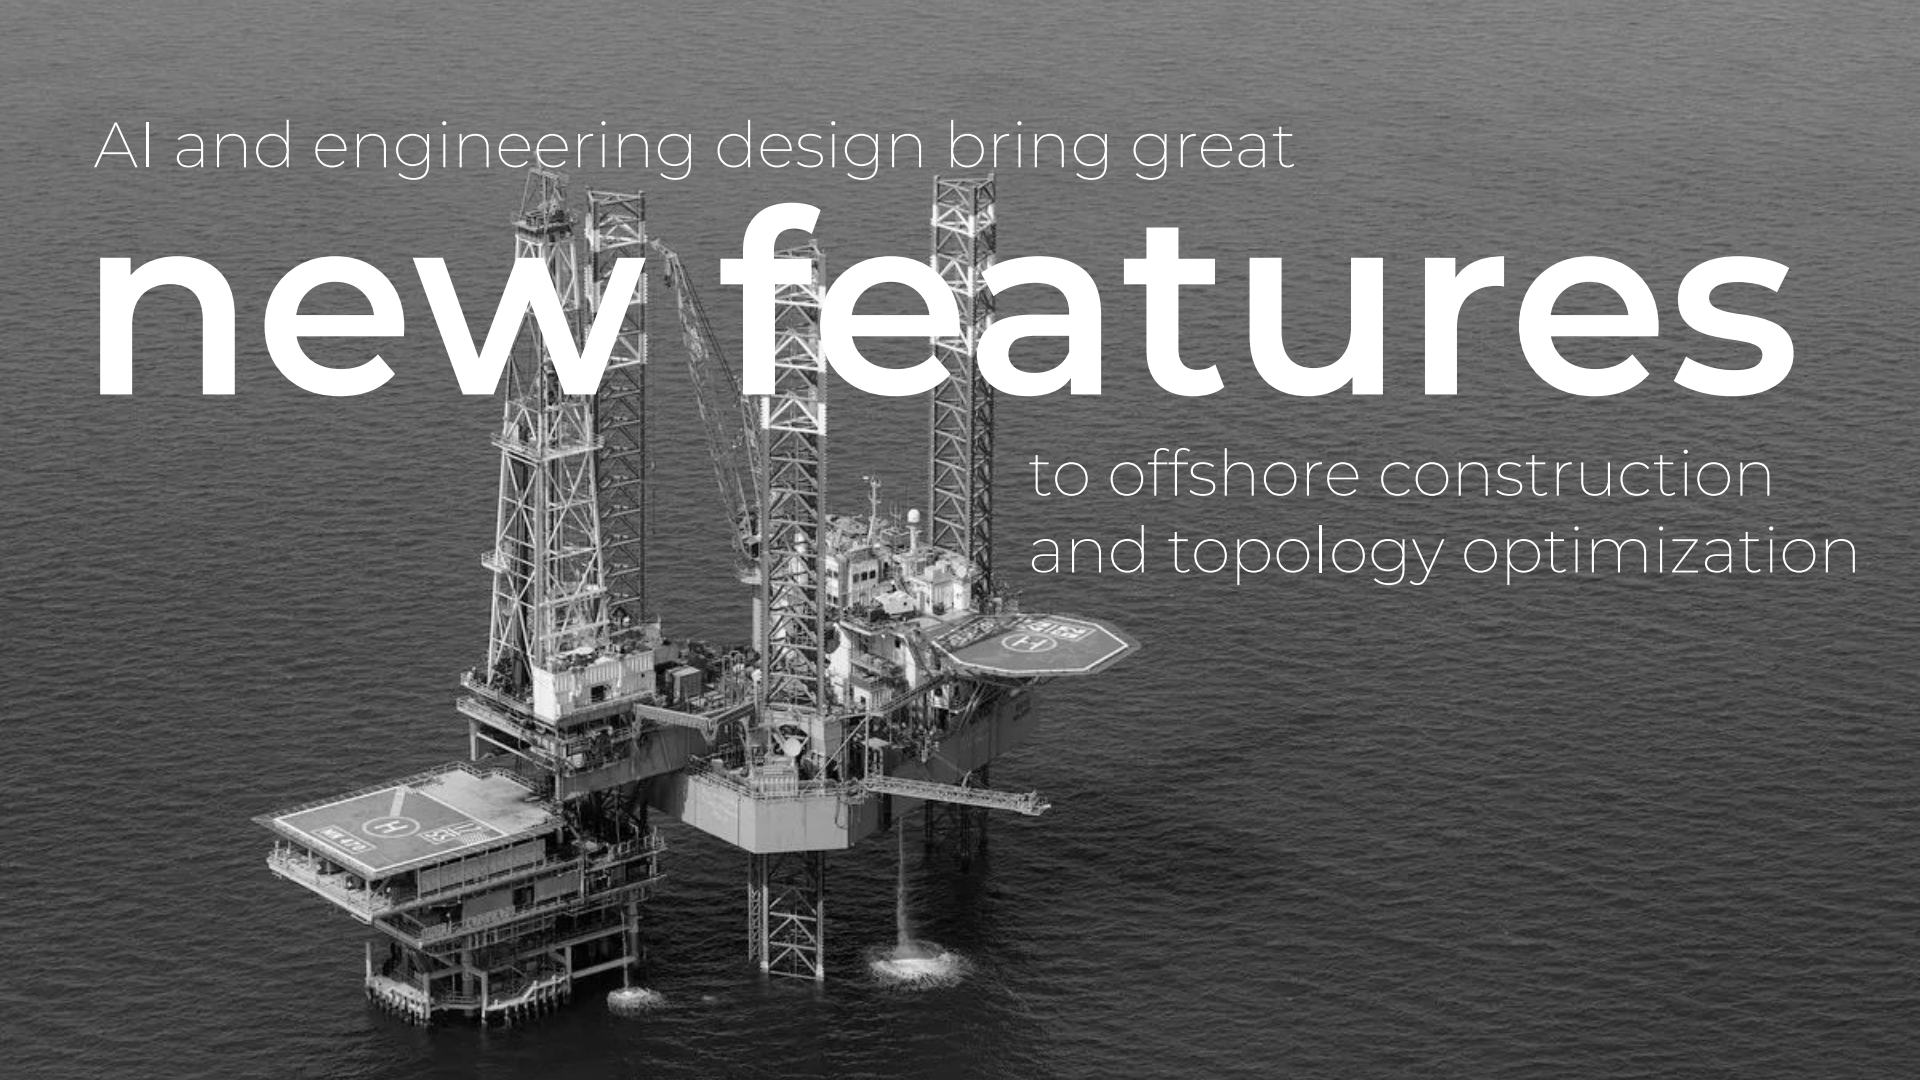
Engineering Design by
Artificial Intelligence

Georgy Tskhondiya

Hello. I am Georgy, ex subsea pipeline installation engineer, data science professional & founder at Gigala. I combine structural engineering and artificial intelligence to optimize designs of mechanical and electrical components.

Mission

- Solvie creativity to advance science and engineering
- Make AI accessible

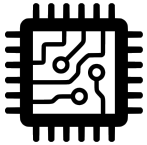


AI and engineering design bring great
new features
to offshore construction
and topology optimization

Our expertise

OFFSHORE DYNAMICS

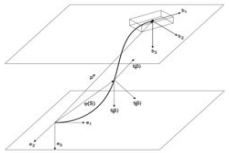
- Subsea pipelines installation
- Lifting operation
- Offshore floating wind farms
- ROV/UUV control
- Dynamic positioning with AI



TOPOLOGY OPTIMIZATION

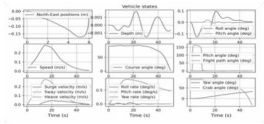
- Mechanical structures
- Electrical circuits
- MEMS
- Computer chips
- Jet engines

OFFSHORE DYNAMICS

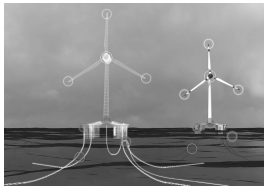


Pipelay dynamic simulation
Bending, stress and strains during the offshore procedure. Design criteria in accord with DNV-OS-F101 standard.

Lifting operation automation
Lifting stability in accord with DNV-ST-H205 standard.



Vessel motion
As input to offshore dynamics simulation.

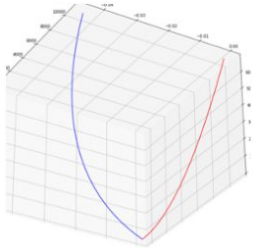


Offshore floating wind farms
Efficacy of the technology.

Subsea pipeline installation **EXPERTISE**

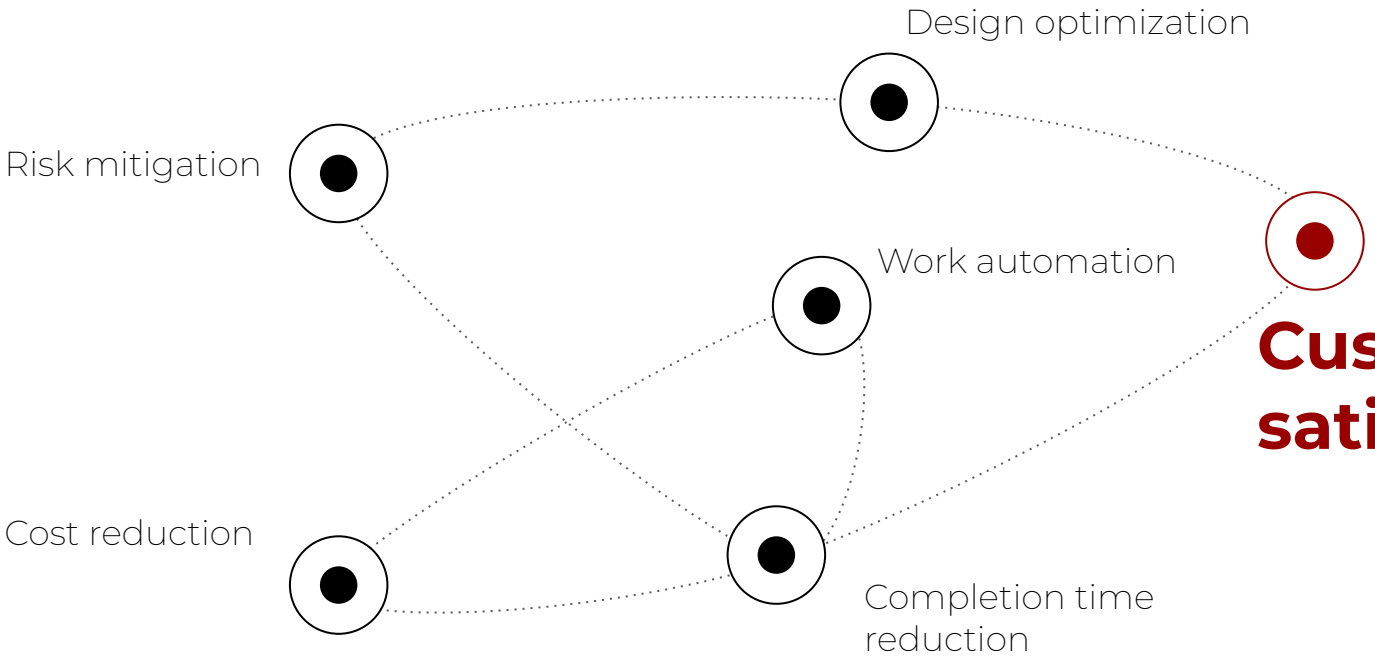
Certificat
Installation calculation for subsea pipelines

Methodology
Subsea pipelines installation analysis



Software
For modelling offshore dynamics during construction phase

in each project we work on

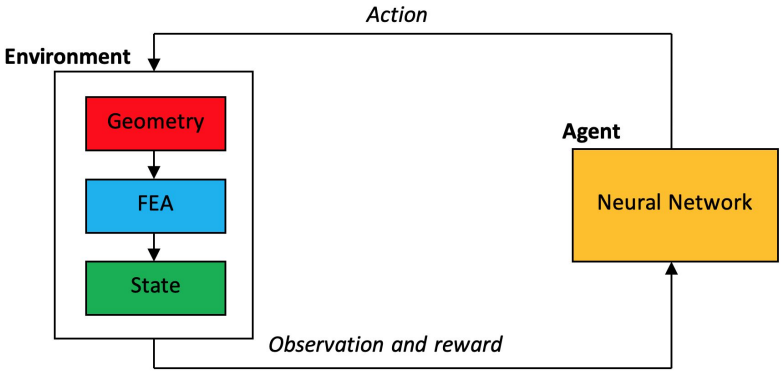


OFFSHORE DYNAMICS

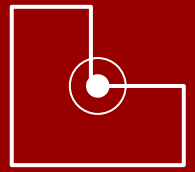
demo

You can find and try our solutions at

GitHub follow the link or QR-code



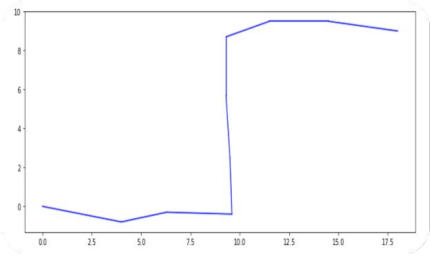
Engineering design automation *can be formulated as Markov decision process (MDP). where an engineer provides initial geometry of a structure, sets loads and allowed actions to alter the geometry, specifies the optimization objective (e.g. minimize weight, maximize stiffness), and starts training the model. After the training, in inference stage, the engineer gets her final design. This process can be augmented by recent developments in Generative AI.*



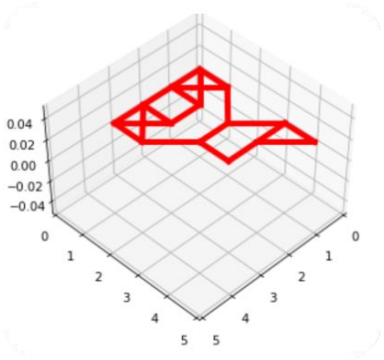
TOPOLOGY OPTIMIZATION

- Mechanical structures
- Electrical circuits
- MEMS
- Computer chips
- Jet engines

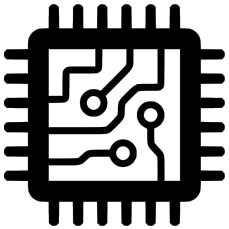
Spools



Bionic partition



MEMS & Chips



Software

for topology optimization and sizing

TOPOLOGY OPTIMIZATION

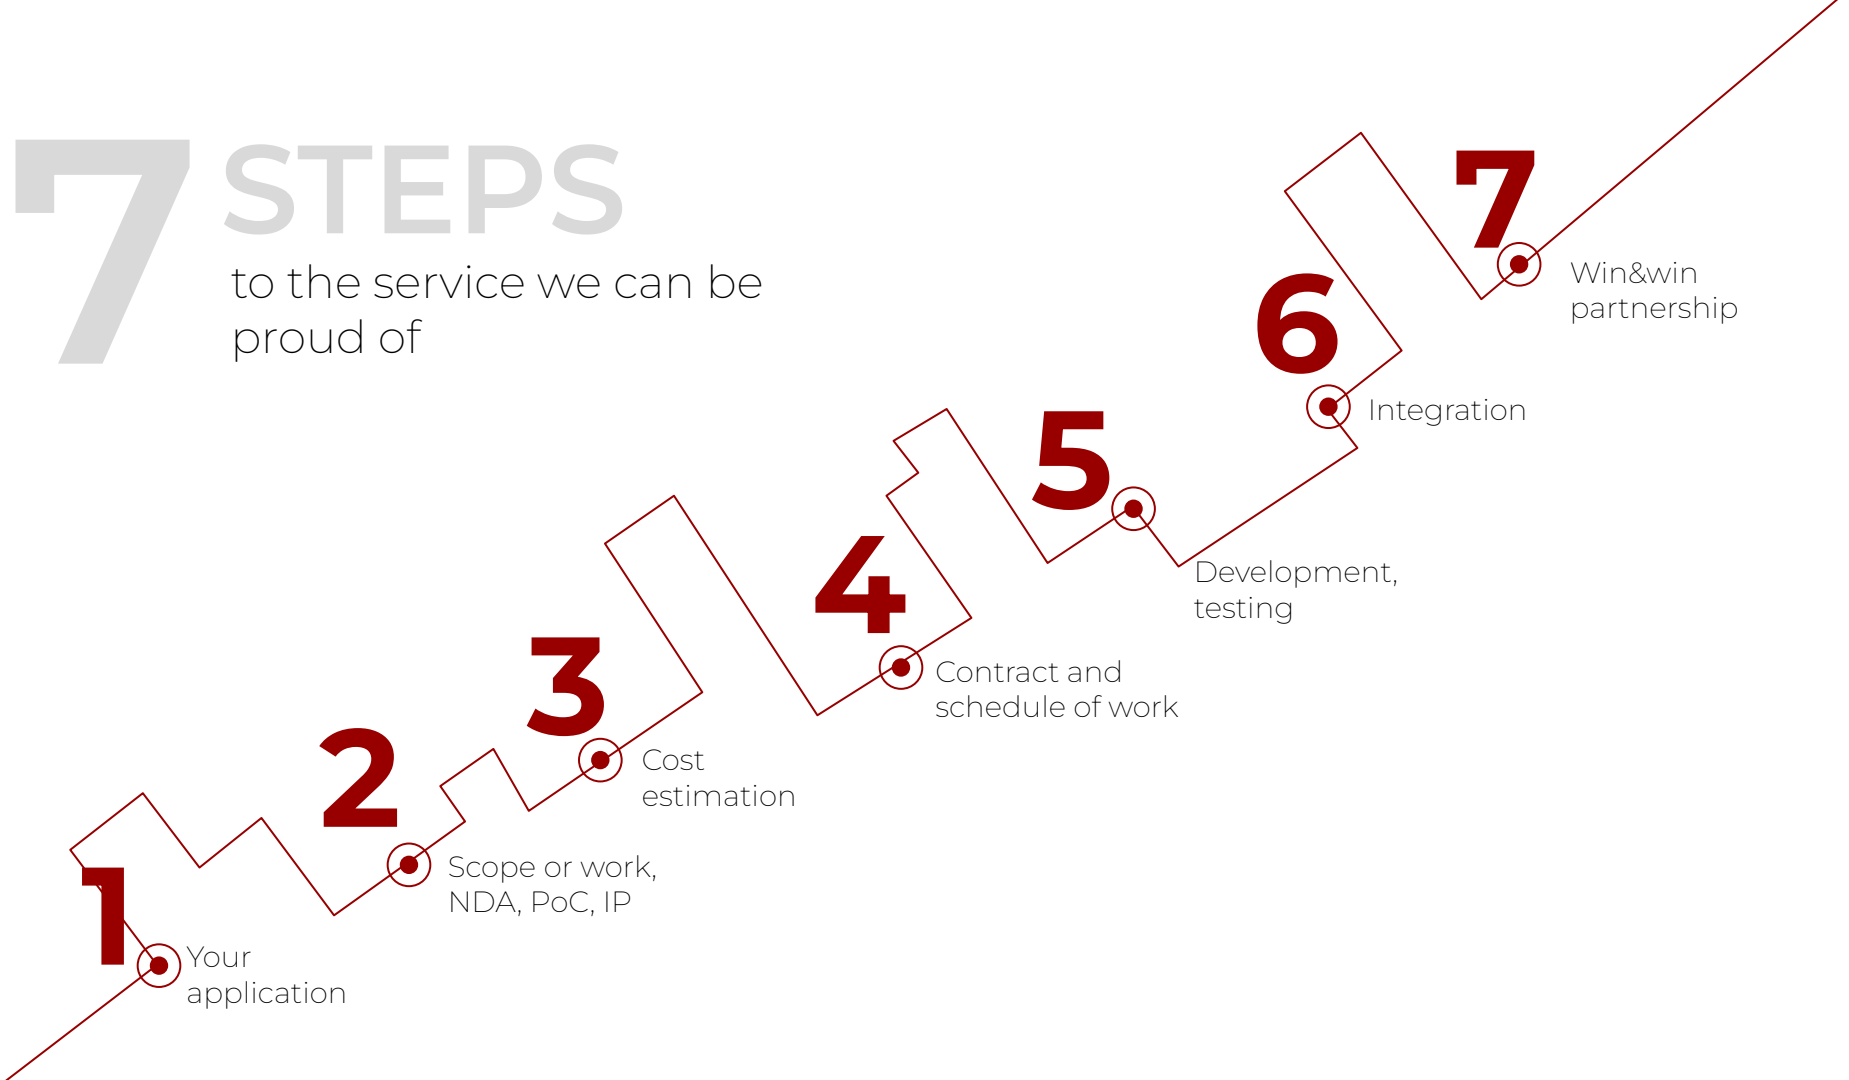
7 STEPS

to the service we can be proud of



What we do and work with

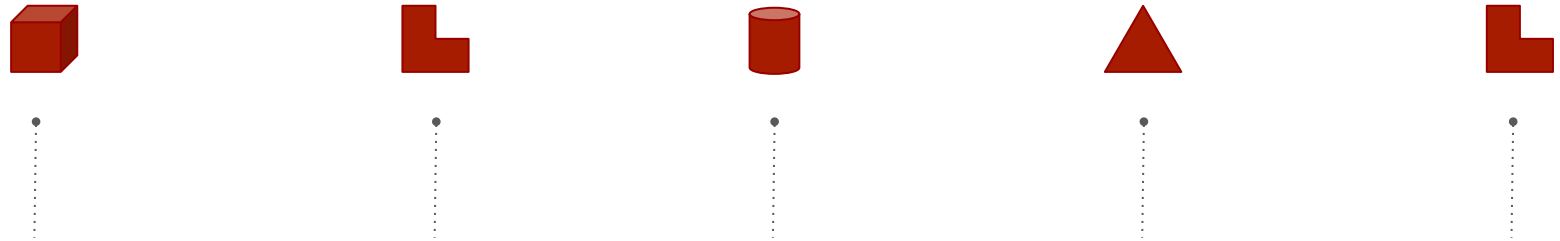
Pipelay dynamics: J-lay, S-lay

Risers, moorings, pipelines

Pipelay automation

Hardware-in-the-loop (HIL) testing for vessel control systems

Lifting operation



Offshore floating wind farms dynamics

ROV/UUV control

Vessel motion

Topology optimization

Pipelay profile optimization

Pricing on

development

- PoC at the rate of 50$/ hr per engineer
- Project tailoring cost to be discussed individually

free

demo and sample code testing

Experience

8 years

PhD MAI'12, and offshore engineering

7 years

in data science
