

GIGALA

Engineering Design by
Artificial Intelligence

Georgy Tskhondiya

Hello. I am Georgy, ex subsea pipeline installation engineer, data science professional & founder at Gigala. I combine structural engineering and artificial intelligence to optimize designs for mechanical and electrical components.

Mission

- Solving creativity to advance science and engineering
- Making AI accessible

AI and engineering design bring great

new features

to offshore construction
and topology optimization

Our expertise

OFFSHORE DYNAMICS

- Subsea pipelines installation
- Lifting operation
- Offshore floating wind farms
- ROV/UUV control
- Dynamic positioning with AI

TOPOLOGY OPTIMIZATION

- Mechanical structures
- Electrical circuits
- MEMS
- Computer chips
- Jet engines

Bending, stress and strains during pipeline installation.
Design criteria in accord with DNV-OS-F101 standard.

Lifting stability in accord with DNV-ST-H205 standard.

As input to offshore dynamics simulation.

Efficacy of the technology.

Subsea pipeline installation **EXPERTISE**

Certificat

Installation calculation for
subsea pipelines

Methodology

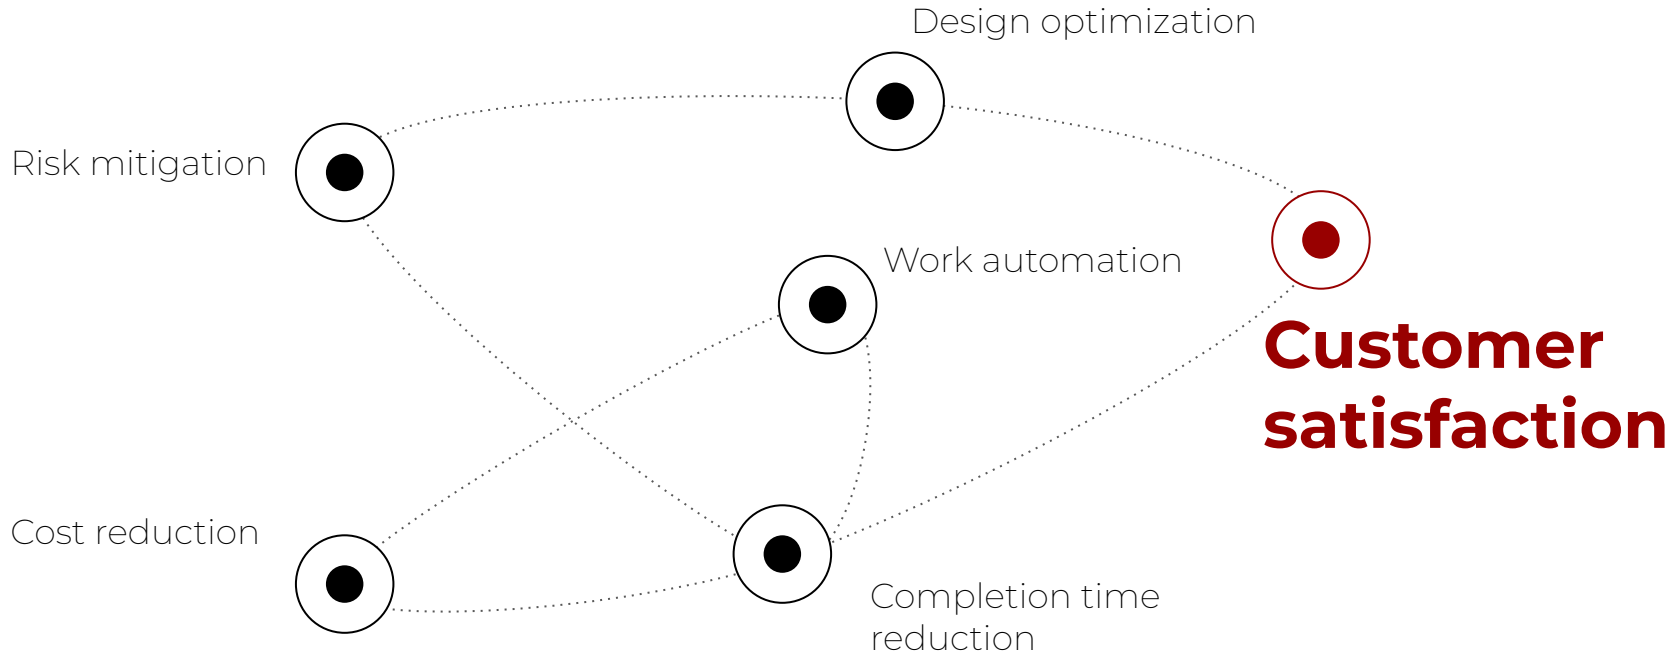

Subsea pipelines
installation analysis

Software

Modelling offshore dynamics
during construction phase

in each project we work on

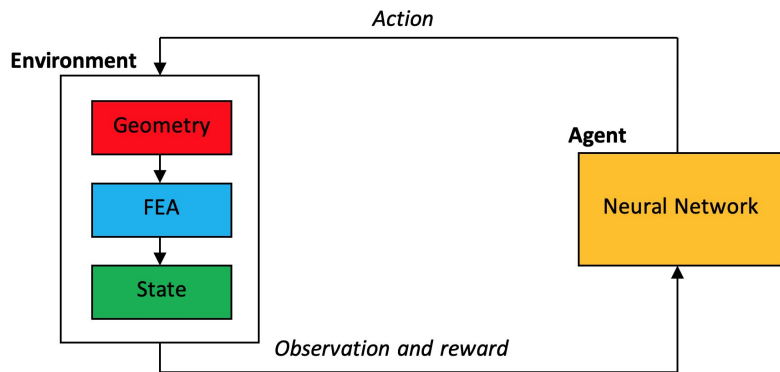

OFFSHORE DYNAMICS demo

You can find and try our solutions at

 **GitHub** [follow the link](#) or QR-code

Engineering design automation can be formulated as Markov decision process (MDP). where an engineer provides initial geometry of a structure, sets loads and allowed actions to alter the geometry, specifies the optimization objective (e.g. minimize weight, maximize stiffness), and starts training the model. After the training, in inference stage, the engineer gets her final design. This process can be augmented by recent developments in Generative AI.

TOPOLOGY OPTIMIZATION

- Mechanical structures
- Electrical circuits
- MEMS
- Computer chips
- Jet engines

Spools

Bionic partition

MEMS & Chips

Software
for topology optimization and sizing

TOPOLOGY OPTIMIZATION demo

7 STEPS

to the service we can be proud of

1 Your application

2 Scope or work, NDA, PoC, IP

3 Cost estimation

4 Contract and schedule of work

5 Development, testing

6 Integration

7 Win&win partnership

Pipeline dynamics: J-lay, S-lay

Risers, moorings, pipelines

Pipeline automation

Hardware-in-the-loop (HIL) testing for vessel control systems

Lifting operation

What we do and work with

Offshore floating wind farms dynamics

ROV/UUV control

Vessel motion

Topology optimization

Pipeline profile optimization

Pricing on development

PoC at the rate of 50\$/ hr
per engineer

Project tailoring cost to be
discussed individually

free

demo and sample code
testing

8 years

PhD MAI'12, and offshore
engineering

Experience

7 years

in data science

Technologies

Writing high quality
CODE

State-of-the-art
TECHNOLOGIES

No/low
DATA
